

Varun Bedi

Staff Technical Program Manager | Enterprise Infrastructure Transformation | FinOps & AI-Enabled Program Operations

201-406-4217 | varunbedi.it@gmail.com | linkedin.com/in/bedivarun | Ashburn, Virginia

SUMMARY

Staff Technical Program Manager and strategic leader with 17 years of experience driving complex, cross-functional initiatives that support multi-billion dollar organizational priorities. Specializes in the architectural design of PMO Centers of Excellence, high-stakes M&A platform unifications, and global infrastructure transformations. Builds repeatable, metrics-driven program processes — quarterly planning cycles, phase-gated readiness reviews, automated governance dashboards — that scale delivery predictability across large, distributed engineering organizations while remaining a trusted strategic partner to senior leadership. Builds custom Claude-based automation — skills spanning program reporting, roadmap synchronization, and meeting-to-action workflows — that reduce manual PM overhead across programs.

SKILLS & TOOLS

Technical Program Management • Cross-Functional Leadership • Cloud Transformation & FinOps • Platform Consolidation & Integration • Data-Driven Governance • Strategic Roadmap Execution • Risk Management • Regulatory & Compliance Programs • Executive Reporting • Agile & Waterfall

Tools: Airtable · Jira · Confluence · Slack · Miro · Figma · Hex · Grafana · Claude · Gemini

EXPERIENCE

Staff Technical Program Manager — UnityApr 2025 – Present

Ashburn, Virginia · Promoted from Senior Technical Program Manager

- Leads Program Kraken, the strategic unification of ironSource (LevelPlay, Offerwall) and Unity Ads into one modernized customer dashboard — 7 workstreams and 150+ contributors across 5 products, each with its own product and engineering lead; owns rollout sequencing and GA strategy per product.
- Scaled the Kraken org-migration flywheel from pilot waves of 15 orgs to production waves of 10,000+, migrating 3.11M non-Ads orgs and 14,483 Ads orgs representing \$26.8M in ad spend within 2 months of GA launch.
- Delivering new MCP (Model Context Protocol) and CLI capabilities on Unity's managed API v2 as part of Kraken, extending programmatic access for customers moving onto the unified platform.
- Directing Program Stratus, consolidating Ads cloud infrastructure across LevelPlay, Offerwall/Tapjoy, and Unity Ads onto shared tooling — aligning two separate product organizations under their respective VPs, holding 99.9% quarterly uptime and no ad-serving latency or revenue regression as program KPIs, and reporting weekly to the executive sponsor.
- Pivoted Stratus from single-vendor GCP consolidation to a resilient multi-cloud (GCP/AWS) architecture after identifying unfavorable vendor pricing, protecting margins and uptime; parallel cloud-cost initiatives cut annual GCP spend by \$19M.
- Drove cloud cost efficiency by partnering with ML teams across model training, feature platform, and inference to attack compute cost at each layer; drove resource-labeling adoption with Infrastructure to establish per-team cost ownership; and built a cost-to-revenue ratio with the BI team to make efficiency measurable against revenue rather than in isolation.
- Runs programs end-to-end from initiation through launch readiness and GTM strategy, coordinating beyond engineering into legal, finance, marketing, account management, and product enablement.
- Owns Ads Infra roadmap tracking and governance across engineering teams, maintaining a single, reliable source of truth for prioritization and delivery timelines.
- Driving company-wide rollout of Unity Commons, an enterprise AI knowledge-capture initiative that turns AI-assisted work sessions into shared, reusable context — cutting redundant token spend (and AI cost) by reusing captured knowledge instead of re-deriving it each session; expanding adoption from engineering to non-engineering teams company-wide.
- Piloted integration of U-Know, Unity's internal AI knowledge assistant, with Program Kraken — validating automated Q&A on program status, milestones, and workstream history with the Data Science team to cut repetitive status requests.

Senior Technical Program Manager — UnityJul 2022 – Mar 2025

Toronto, Ontario, Canada

- Spearheaded EU Digital Services Act (DSA) compliance — architected moderation thresholds and transparency-reporting frameworks for content review and appeals workstreams.
- Directed roadmap and governance for Unity's Grow organization — 600+ people across 20+ specialized engineering pods in AMER and EMEA.

- Architected Airtable v3, the first unified single-source-of-truth roadmap for Unity Grow, mapping 2,000+ records into a Global Governance Engine that reduced missing data from 27% to 8% and lifted on-time delivery from 35% to 59%.
- Implemented automated Slack-integrated alerts for overdue roadmap items, improving delivery predictability by 24%, and mentored engineering leads on roadmap integrity and dependency management.
- Developed “PMO Insights,” an executive reporting series for Sr. Directors and VPs, translating raw roadmap data into resource-allocation recommendations that addressed a 42% systemic dependency bottleneck.
- Facilitated SEV0/P0 blameless postmortems (e.g., uAds iOS crash incidents), embedding preventative controls into CI/CD pipelines.

Sr. Program Manager, Infrastructure & Cloud — Equifax Nov 2019 – Jul 2022

Toronto, Ontario, Canada

- Led a team of 3 project/program managers driving Equifax Canada's total infrastructure transformation; ran executive steering committees on security, audit, and compliance.
- Orchestrated a one-week decommissioning blitz across primary and secondary data centers alongside the retirement of legacy Mainframe/AS400 systems, for \$23M in combined annual savings — coordinating a 30+ person team spanning 5 vendors to securely dispose of 4,000+ hardware components and PII-bearing drives on-site, and sequencing vendor and data-migration timelines to avoid disruption to co-located third-party customers, with zero incidents in an active, multi-customer data center.
- Partnered with Equifax's client-partner teams to migrate 100s of enterprise customers — including major Canadian banks and telecom providers — and their engineering teams off Mainframe-to-Mainframe connectivity onto Apigee/API architecture, eliminating data-center dependencies; led further networking initiatives enabling cloud transformation, including creation of the Global Network Security Stack (GNSS).
- Led SOX and PCI compliance reviews with external auditors, partnering with Equifax's security teams to validate control effectiveness.

Program Manager, Core Technology Transformation — Manulife Sep 2018 – Oct 2019

Toronto, Ontario, Canada

- Led the pilot for Manulife's first OCR-based claims automation initiative, running Agile squad standups and sprint ceremonies to validate automated processing of group life insurance claims; coached the team through Manulife's transition to Agile delivery in partnership with the Manulife Agile Center of Excellence.
- Directed a large-scale, security-sensitive migration of PII data off legacy on-premises drives and mainframe systems onto Microsoft Azure — partnering with product, legal, and data teams to define data-retention requirements, coordinating drive acquisition with data-center/mainframe teams, and ensuring encryption at rest and in transit throughout the transfer.

Sr. Project Manager, Service Delivery — Bridgewater Associates Jan 2015 – Sep 2018

Stamford, Connecticut · Cognizant, client-embedded

- Led an engineering team developing, upgrading, and supporting Windows-based web applications, COTS products, and MS SQL databases delivered as PaaS/SaaS to internal business and technology teams at the world's largest hedge fund.
- Implemented Agile framework and ran Incident/Problem/Change/Knowledge/Configuration management processes; owned lifecycle management, SLA/OLA compliance, and critical-incident escalations.

Earlier: Technical Project Manager, NYK Line — Secaucus, New Jersey (2011–14, TCS, client-embedded): led the support team for the IT arm of one of the world's largest shipping liners; designed and governed ITIL Incident, Problem & Change management processes and ran firm-wide critical-incident calls. Senior Software Engineer, Tata Consultancy Services — Gurgaon, India (2008–11): built and maintained a .NET contracts application for Maersk Line.

EDUCATION

Rajiv Gandhi Technical University — India — BE (Hons.), Electronics & Communications, 2004–2008
